When I think of the PS icon, I think of some older-model Mac computers and Photoshop. Now, seeing that I have a Mac Pro, I'm not sure that I can call Photoshop old. I wonder about the compatibility between this version of PS and older Mac models. However, Photoshop is pretty much universal in terms of features, due to the strong development skills of the company. Just like the case of Lightroom, no version of Photoshop has the market share that Photoshop does. Adobe's RSA algorithm makes every photo it works on more secure by offering greater protection against the use of millions of known digital forgeries. It's several notches higher than the industry standard Anti-Image Spam (AIS) algorithm - and it's more scalable, too. It's also fairly easy to copy or, worse yet, use for your own purposes in malicious ways. Adobe Photoshop is one of the classic yet powerful products on the market. Most photographers who don't jump in photographer's nightmare sometimes know somebody who does, and who says that Photoshop is a very serious work. I also think it's a great tool, because the company behind it: Adobe, always knows how to create something that's easy to learn, easy to use and above all a bit more impressive than other similar products. However, Photoshop CS6 and CS6 are just too expensive. I'm not talking about the actual cost of a license - I'm talking about the price in finances. If you're a beginner or are working on a tight budget, you should definitely get Lightroom as your go-to software; it will be enough for most occasions.
