Overall, I'm very happy with Lightroom 5. The fastest and most reliable tool for working on images, Lightroom 5 is more stable than ever. And because of the new features, it's custom-tailored for photographers who want to do as much as possible with the RAW file as they can. All in all, I'd say Lightroom 5 is the first version that justifies the price and even the \$399.99 list price. It's good enough for me to say that I'm very happy I bought it with my own money. With its latest update, Adobe Photoshop Elements 2019, Photoshop includes In-Place Corrections, a first for the company. Now, the software can apply corrections and apply these in-place without requiring you to save the file first. It can also use a background image as a canvas, which you can erase and recolor in other ways. The update also had other tweaks, including improvements to tools, and added new artboard shapes for more complex projects. On the downside, In-Place Corrections and the new artboards don't seem to work in the CC 2017 version. Years ago, I became a die-hard Apple user, and not just because I had a Mac. Apple had a nice thing going; the company had products that worked well and were reliable. I had no issues with the hardware, and this set me apart from the competition. Apple made a great product that seemed like it would last forever. The sad reality is, Apple's keeping the brand alive—for now. Apple is not a viable company anymore, at least not in a traditional sense.
